Yuval-Davis, N. 1997. *Gender and Nation*. London: Sage. (5)

4. SOCIAL CLEAVAGES, PARTIES AND VOTING

Political parties were once thought to reflect the class composition of society, and individual party preference was thought to be determined largely by class position. In recent decades, however, the class bases of parties and voting patterns have been called into question. More emphasis has been placed on changing values as determinants of party choice and on the role that parties themselves play in shaping political life.

7. SOCIAL MOVEMENTS

Much recent controversy in the study of social movements centres on (1) the relationships among structure, culture and agency and (2) the causal weight that should be accorded each domain in the mobilization of social movements, the crystallization of social movement strategy and the level of success of social movements.

8. GLOBALIZATION

The readings in this module encourage investigation into how social life, the state, the economy, and social dissent have changed in the globalization period (roughly dated from the late 1970s onwards). At the same time students investigate new features of this period (e.g., neoliberalism, transnational social movements), they are encouraged to simultaneously examine historical continuity, and be wary of tendencies to abandon analyses of traditional political actors like the state and social classes. Key concepts: neoliberalism, cosmopolitanism, risk society, transnational social movements/activist networks, global civil society, state and world economy
